Virtual Reality teaching and training tools/technology

We believe that the use of Augmented Reality (AR) or Virtual Reality (VR) as a teaching and training tool is the best way to present our worldview and understanding of our planet, solar system and the cosmos. AR/VR teaching and training provides the multisensory “in the now” perceptions to vastly accelerate learning and integration of “new paradigm” information. In teaching this information emotional content is a very important aspect. We want to facilitate interspecies respect and communication and even the idea is not emotionally acceptable to most people. We will embed the “Happiness Formula” in our learning games. $H = (G + DH + C + 3R) / 6$

See: <http://www.behappy101.com/happiness-formula.html>

Below are some examples of scenes we will present in Augmented Reality. They are from the collection of articles written by Will Barkley under the heading Scientific and Historical Anomalies:

Scene 1 Time travel to the distant past when 6' tall humans, 12' tall humans and dinosaurs coexisted.

There is abundant hard evidence to prove that humans and dinosaurs lived at the same time in history. This fact is vehemently denied and poo-hooed by the defenders of our contemporary model of human history (Uniformitarianism and Evolution) which states, basically, that there have only been two major geologic forces at work in earth's history, volcanism and erosion. As J.R. Jockmans states in Strange Relics from the Depths of the Earth: “Other discoveries have been made that contradict the accepted model. Yet these discoveries are largely ignored, since it is far easier for the majority of scientists and historians to uphold what is ‘established’ than to try to build a new model based on the ‘exceptions’”.

Jockmans recounts the story of 4 prospectors who were looking for gold and silver outcroppings near Eureka, Nevada, in July of 1877. They discovered a human leg bone and knee cap which were placed on public display. After examination by several medical doctors it was determined that the bones had belonged to a person who stood over 12 feet tall! The rock in which the bones were found was determined to be from the Jurassic Period, which supposedly started approximately 213 million years ago and was the age in which dinosaurs roamed the earth.

Scene 2 In his 5th article, “Muddy Footprints Across the Face of Time”, Jockmans discusses man tracks, dinosaur tracks and saber tooth tiger tracks found along the Paluxy River near Glen Rose, Texas. There are fossilized tracks of normal sized humans and giant humans along with Brontosaurus and Tyrannosaurus Rex, all in the same layer of fossilized mud. This must be a hoax, right? Why? Very simply because the accepted and existing model of human history (archaeology), paleontology and geology says that humans did not exist at that point in time. Never mind the evidence! It is impossible simply because it does not fit the “storyline”.

Scene 3 Later in the same article, Jockmans describes an even more remarkable set of tracks found in Fisher Canyon, Pershing County, Nevada, January, 1927. A fossilized moccasin-shoe heel was found in Triassic limestone, 225 million years old. Micro-photographs revealed a double row of stitches that had been done with materials and workmanship more advanced than that used by the shoe-makers of 1927. Directly quoting from the last paragraph of this article, “As Mr. Samuel Hubbard, Honorary Curator of Archaeology of the Oakland Museum in California, commented: ‘There are whole races of primitive men on earth today, utterly incapable of sewing that moccasin. What becomes of the Darwinian theory in the face of this evidence that there were intelligent men on earth millions of years before apes were supposed to have evolved?’”

The report above is one of twenty four wide ranging articles dealing with Scientific and Historical Anomalies. In January, 2017 we add two more regarding how the heart does NOT pump blood and the fourth phase of water, H₃O₂, is the force that moves blood through our circulatory system.
