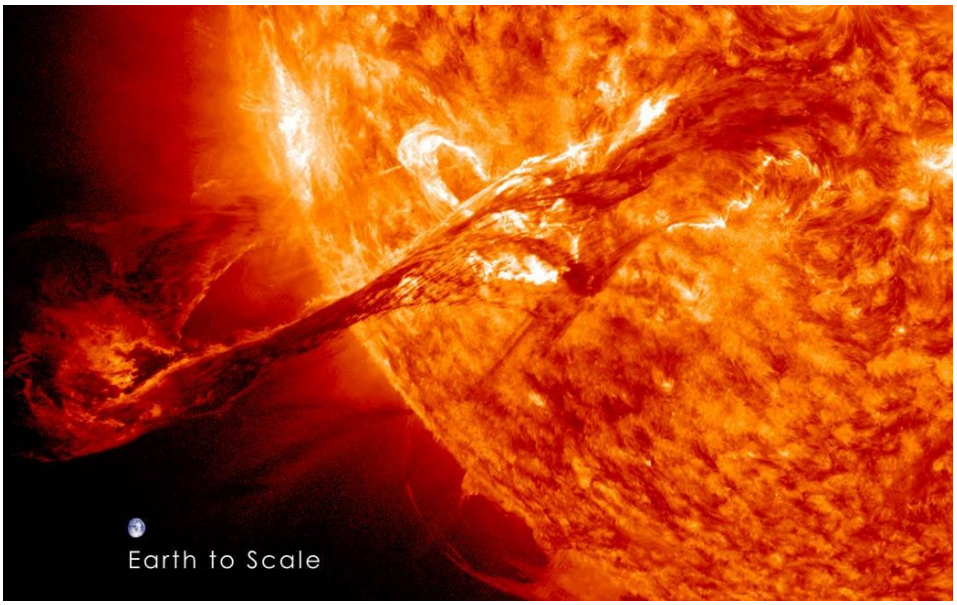
Proposed video script for Lockheed Scholarships to Freedom Farms

Camera 1 follows Will. Camera 2 focuses on the graphics.

If this photo of our sun, with the earth shown to proper scale, is as interesting to you as it is to me, <u>perhaps</u> you will be interested in the Freedom Farms Learning Center crowdfunding campaign. It's got a unique twist to it, so please bear with me.

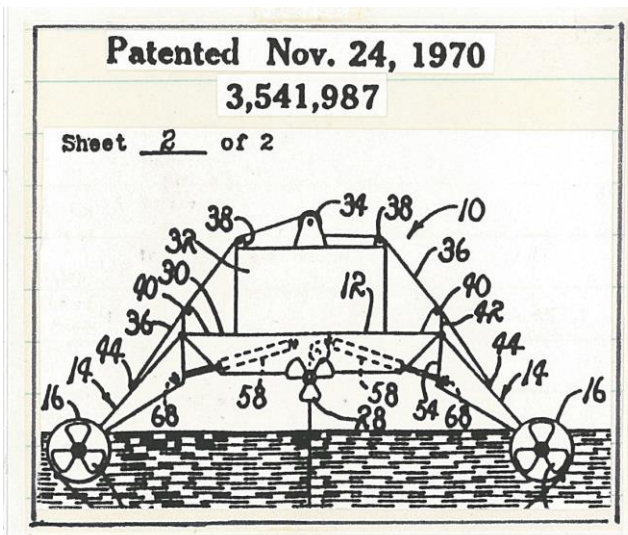


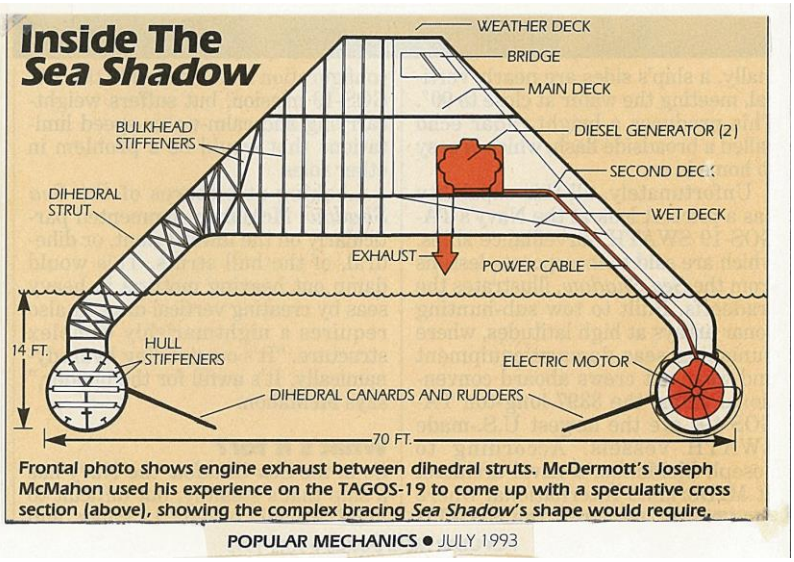
You can join our public relations team with an online petition to Lockheed Martin Board of Directors for a $20 million award to FFLC for development of virtual reality learning games. If successful, all petition signers will receive a $2500 scholarship credit.

If you are old enough to remember the Navy's Stealth Ship, named the Sea Shadow, your interest level should go up a notch.

It was a central part of the1997 James Bond 007 movie, Tomorrow Never Dies.

I was only 34 years old when I was granted patent # 3,541,987, November 24, 1970.

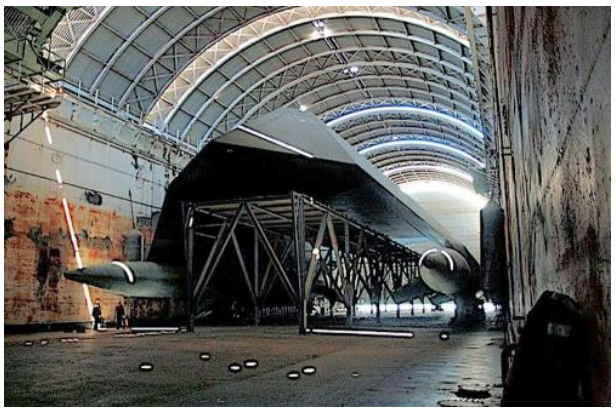




Frontal photo shows engine exhaust between dihedral struts. McDermott's Joseph McMahon used his experience on the TAGOS-19 to come up with a speculative cross section (above), showing the complex bracing *Sea Shadow*'s shape would require.

POPULAR MECHANICS ● JULY 1993

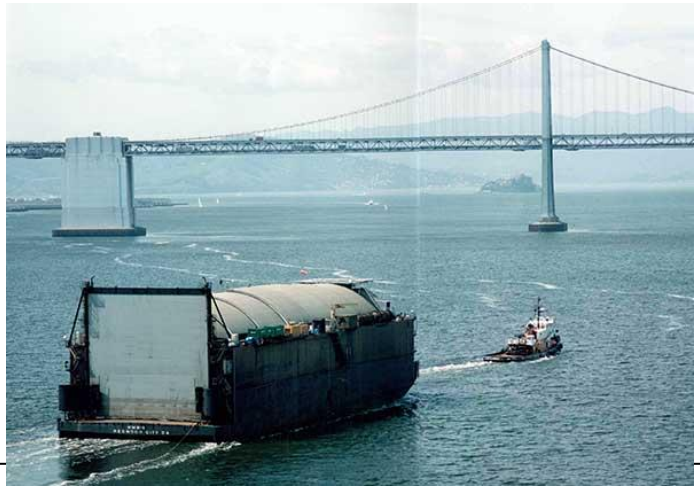
Will Barkley
November 11, 2016.
80 years old

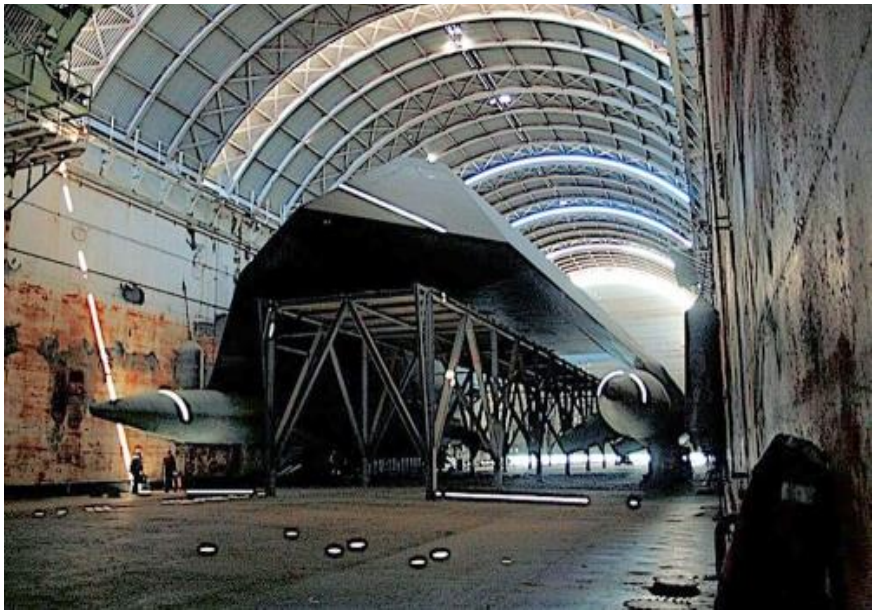


If you are at all interested in the idea of justice, this should <u>really</u> pique your interest! Lockheed, now Lockheed-Martin, the $70 billion dollar Aerospace and Defense Contractor, intentionally and very deliberately used my hull design and secured a U.S. Navy contract for $200 million dollars to build the Stealth Ship.

By the way, $200 million in 1970 is at least $1.2 billion in 2017 dollars.

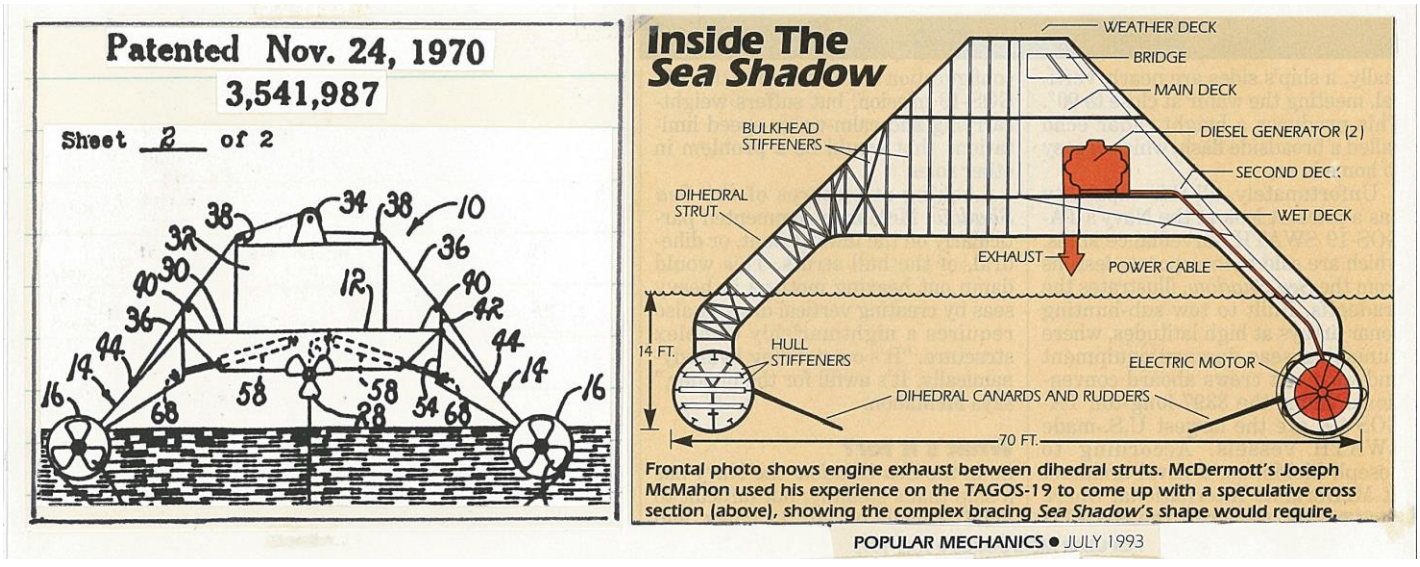
The ship was built under top secret conditions inside a huge, covered dry dock, floating in San Francisco Bay. I used to drive along the Bayshore Freeway and look out my car window at that huge structure and wonder, "What the heck is going on out there?" There was no way for me to discover what went on until the Navy released information on the Stealth Ship in the July, 1993 issue of Popular Mechanics magazine.





When questioned by my patent attorney the U.S. Patent Office's position was that the <u>statute of limitations prevented any lawsuit</u> to recover damages. So, Lockheed used my patent to secure the $200 million contract, built the Stealth Ship and 23 years after my patent was granted, the Navy released the information to Popular Mechanics.

Lockheed violated my patent rights and then used the military secrecy system and a legal loophole to escape any retribution. An online petition to the Board of Directors might provide a financial solution.



So, why am I, an 80-year-old mechanical engineer, telling you this story? Because I believe I have another 20 years or so before I check out. What do I want to accomplish in those 20 years?

Very simply, I want to establish a global network of Freedom Farms Learning Centers and my sense of justice says that Lockheed should help me do that!

How? Let's call it a Lockheed Scholarship Award to Freedom Farms Learning Center to fund the development of Virtual Reality Learning Games.

Did I say that $200 million in 1970 is at least $1.2 billion in 2017 dollars?

Why am I motivated to establish Freedom Farms Learning Centers?

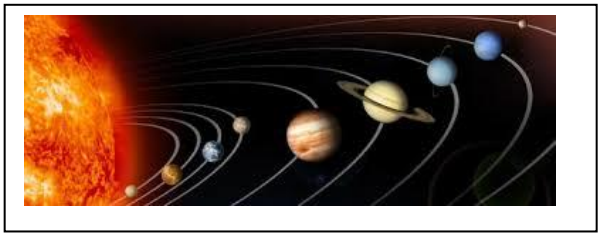
The intense joy of learning something new about myself, about humans and their relationships with each other and animals, about our solar system and the cosmos, continues to be the overriding passion of my life.

I want to share this passion with all living beings. My son sometimes calls me Moe because we both recognize this strong motivation as my own "Moses Syndrome."

If you understand, as I do, that America and our entire planet, is between a rock and a hard place, please email me: Will@FreedomFarmsLearningCenter.org

In order to create the first Freedom Farms Learning Center in Nevada County, CA I must develop a support network of several thousand like-minded people. There is a page on our website called Curriculum. Check it out to determine if you are a "Like Minded People" ☺

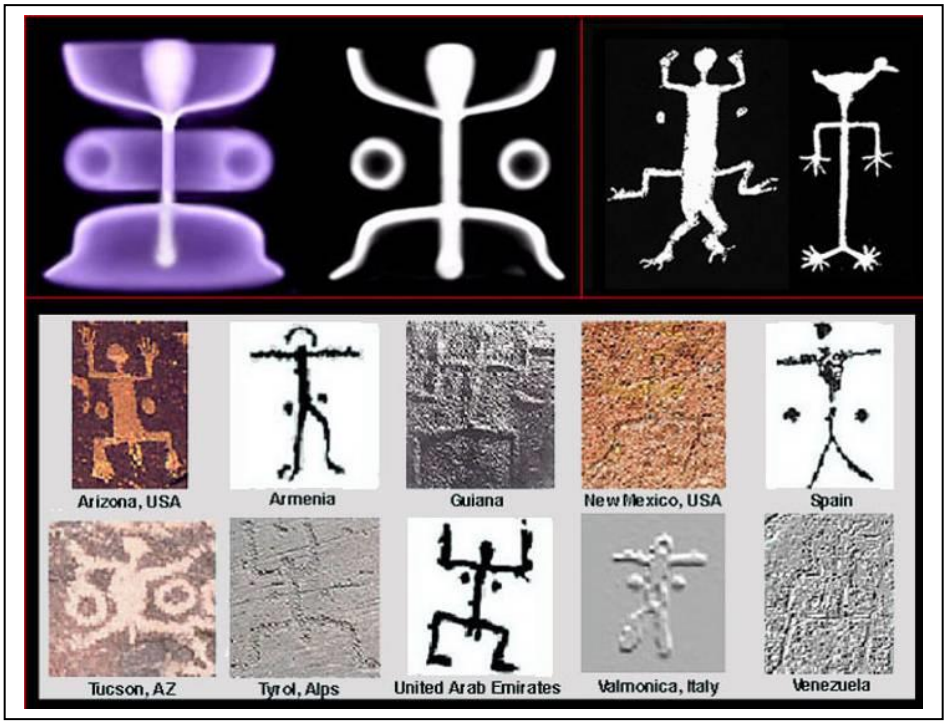
If you are, I would really appreciate your involvement in our efforts to develop freedom oriented Virtual Reality Learning Games.



This Samsung image is a 360 degree camera that we would use to generate the Virtual Reality environments.

I would be so happy to send you coil bound copies of 24 Scientific and Historical Anomalies that I wrote about.

For instance, this graphic shows "Squatter Man" petroglyphs that are found all around the world. The violet colored image in the upper left corner shows a plasma discharge which is produced under lab conditions. Understand the significance of the plasma and the petroglyphs and you will understand that almost all we have been taught is only applicable within an <u>extremely limited understanding</u> of the solar system and the cosmos



Our civilization is broken and I am asking you to join the fix it team. The only way to "fix it" is through education, <u>beginning</u> at the most basic level. Teach the truth, not the political agenda. So long as politicians control the education system it will always default to teaching the political agenda. That's the problem in a nutshell.

Let's do a quick overview of some of the opportunities to participate which are explained in detail on our website: www.FreedomFarmsLearningCenter.org

First, a promise…Freedom Farms promises to tirelessly use every means to end Human and Organ Trafficking, to grow Freedom for All…from basic principles to fruition.

You can join our public relations team with an online petition to Lockheed Martin Board of Directors for a $20 million award to FFLC for development of virtual reality learning games. If successful, all petition signers will receive a $2500 scholarship credit.

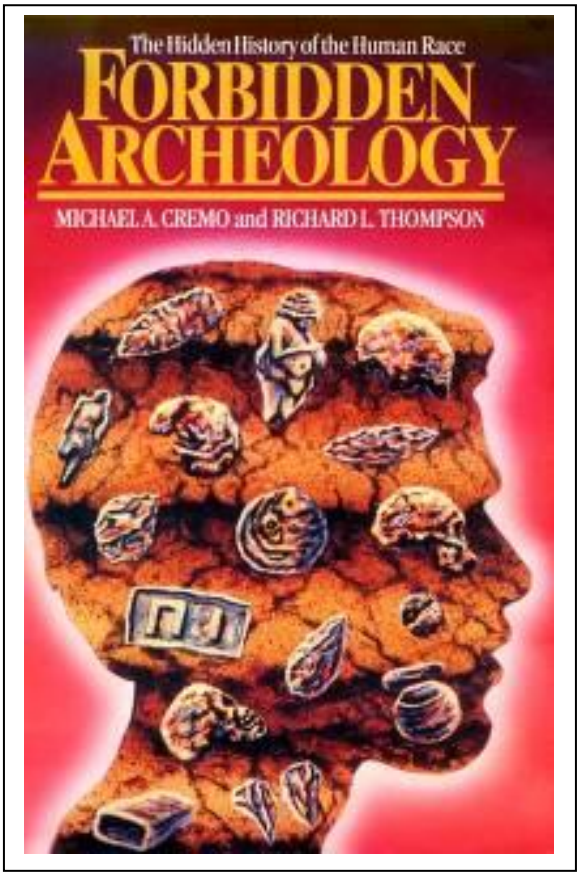
We want to provide respectful and humane treatment of cattle raised to provide organic, pasture fed meats. The existing Confined Animal Feeding Operations are brutal and inhumane for the animals as well as being unhealthy for humans.

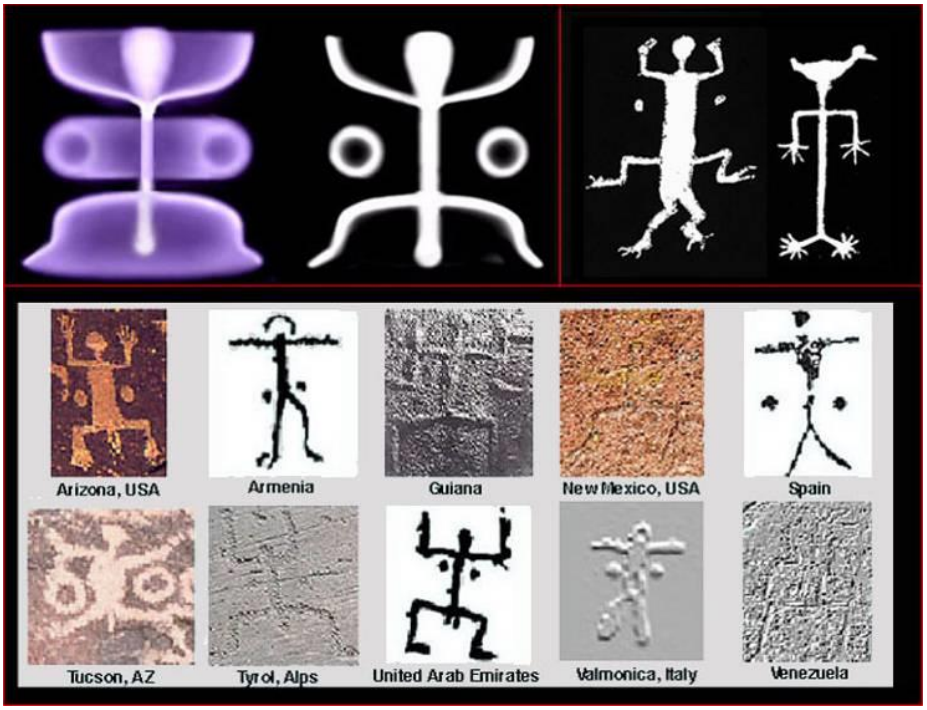
The open beam, open space design shown is our ideal for the Freedom Farms Bed and Breakfast facility which will also serve as our Learning Center for Seminars, Training and Special Events.

We will provide special scholarships for FFLC training using Virtual Reality to learn intuitive (telepathic) animal communication.

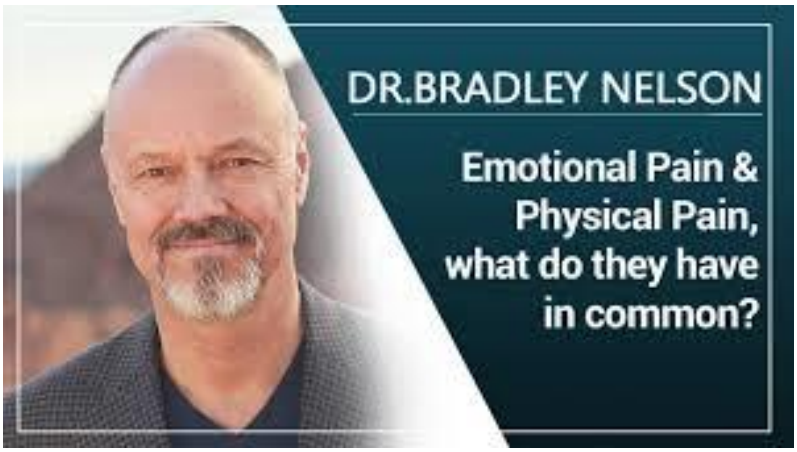
As I said before, get involved and receive coil bound copies of 24 Scientific and Historical Anomalies that challenge the existing cultural, educational, scientific paradigms.

These are the "scripts" we will use for our first Virtual Reality Learning Games.



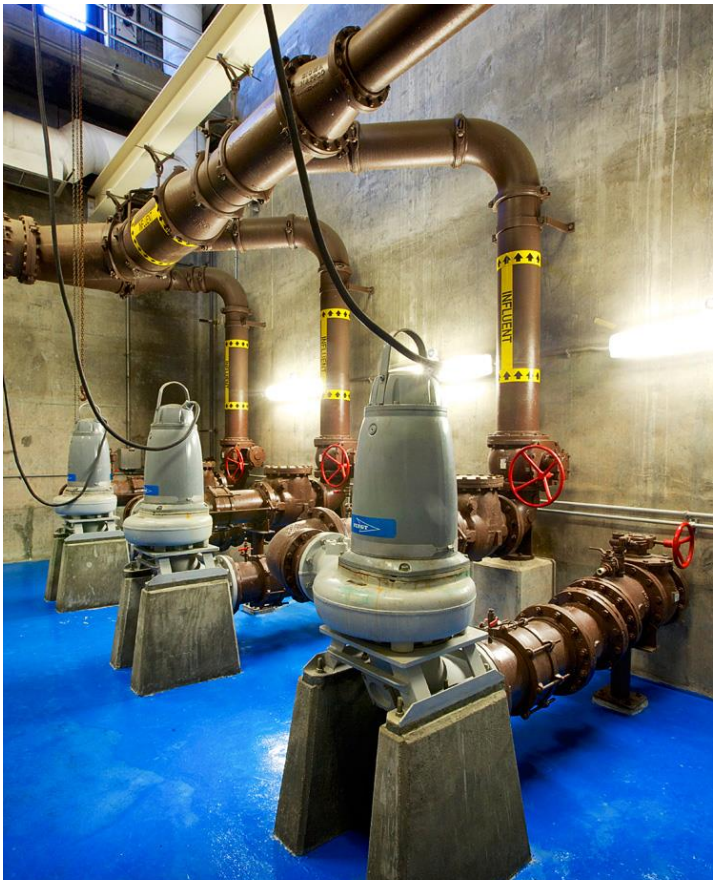


Dr. Bradley Nelson should be awarded the Nobel Prize for energy and spiritual healing by releasing trapped emotions. FFLC will award scholarships for individuals wanting to become Certified Emotion Code and Body Code practitioners.



Email me if you would like to be part of the production team for filming of the movie pilot of my book Pumps!! The theme of the book is that an ElectroMagnetic Pulse, either from a solar flare or a terrorist nuclear detonation 150 miles above the United States, completely destroys the electrical grid. This means there are no pumps to provide water for humans and domestic animals. Without pumped water, 95% of the population will die from dehydration within 2 weeks. This is serious stuff!! Calculated 12% probability from Solar Flare within the next 10 years. This is <u>all of us</u> playing Russian roulette with an 8 chambered revolver.

Get a PDF copy of the book synopsis on our website (See the Will's Info page).



Virtual Reality learning games are the very heart of our teaching and learning methodology. It does not take a clairvoyant to see where this technology is going.

Please join us in growing this magnificent project for the benefit of untold future generations, humans, animals and plants!
